

The figure consists of five vertically stacked line plots, each representing a different week in October 2005. Each plot has a y-axis labeled from -0.2 to 0.6 in increments of 0.2. The x-axis is labeled with dates and times (0: and 12:). The data is represented by a black line with '+' markers and red diamond markers. The plots show a general trend of decreasing residual elevation over time, with some fluctuations. The red diamond markers are placed at specific intervals along the black line.
